

## PRESS RELEASE

# THE ESMA LAUNCHES ITS NEW E-LEARNING PLATFORM FOR THE AIRLINE PILOTS' TRAINING

The ESMA goes on its élan in the establishing of new technologies use with the launch of a multimedia platform.

### ESMA Aviation Academy E-Learning (EAA e-learning)

This multimedia platform will improve the training quality of our airline pilots' students both on site (ATPI and ATPL students) and distance learning teaching.

This new tool facilitates the access to resources and online services (lessons, tests, questions bank, forums ...). It also makes easier the exchanges and the distance collaboration (training follow-up, answer keys, instructors' comments ...). It enables to control the access and the management of all the pedagogical resources too.

The E-learning ESMA on-lining platform is currently operational since **Monday January 25<sup>th</sup> 2010**.

More specifically, students will , among other things, access to the 14 theoretical ATPL modules, coursework, tests typical of exams, a data bank of thousands exam questions both in French as English and also tape listening for the aeronautical English trainings FCL 1.200 and FCL 1.028.

The platform was completely thought and designed to facilitate the work of the pilot students and also to optimize their chance of success within the ATPL tests and enable them to attend the JAA tests with complete confidence.

This new ESMA pedagogical portal is now available from:

- our website in 3 versions (French, English and Chinese)
- the following link: <http://eaaelearning.esma.fr/ESMA/>

Today, the ESMA is the only school in France to propose a full ATPL E-learning training platform which should enable the ESMA to win very quickly important market share both on modular training as on integrated training.
